AIM: Perform basic Image Handling and processing operations on the image

• Read an image in python and Convert an Image to Blur using Gaussian Blur.

Algorithm:

Steps: Convert Image to Gaussian Blur

1. **Start & Import Library**
   Import OpenCV (cv2) for image processing**.**
2. **Read the Image**
   Load the image using cv2.imread() from the given path.
3. **Check Image**
   Verify the image is loaded (img != None), else stop.
4. **Apply Gaussian Blur**
   Use cv2.GaussianBlur(img, (k, k), 0) to blur the image.
5. **Display/Save Output**
   Show using cv2.imshow() or save using cv2.imwrite().

Code:

Expno 2 computer vision.py - C:/Users/POORNA SKHT/Downloads/Expno 2 computer vision.py (3.13.5)

File Edit Format Run Options Window Help

```python
import cv2

# Read the image
img = cv2.imread(r'C:\Users\POORNA SKHT\OneDrive\Pictures\Screenshots 1\Screenshot 2026-07-10 233826.png')

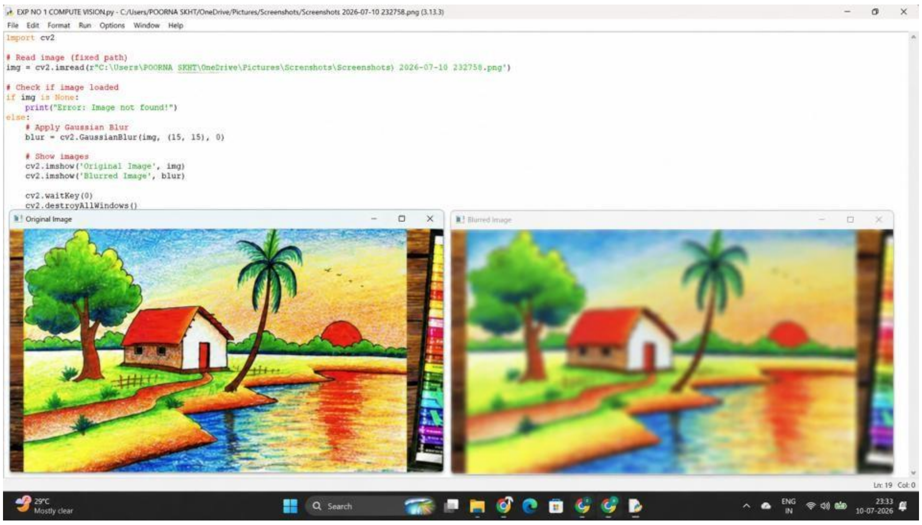
# Check if image loaded properly
if img is None:
    print("Error: Image not found")
else:

    # Convert to Grayscale
    gray = cv2.cvtColor(img, cv2.COLOR_BGR2GRAY)

    # Display images
    cv2.imshow('Original Image', img)
    cv2.imshow('Grayscale Image', gray)

    cv2.waitKey(0)
    cv2.destroyAllWindows()
```

OUTPUT :



Result:

Thus, the image was successfully read and converted into a blurred image using the Gaussian Blur operation in Python with OpenCV.
