EXPNO:29. Morphological Operation Using Erosion

Aim

To perform morphological erosion on an image using OpenCV.

Algorithm

1. Import OpenCV.
2. Read BEN 10.png.
3. Convert the image to grayscale.
4. Create a morphological kernel.
5. Apply erosion using cv2.erode().
6. Display and save the result.

CODE:

```

import cv2
import numpy as np

# Read image
img = cv2.imread("BEN 10.png")

if img is None:
    print("Image not found!")
    exit()

# Convert to grayscale
gray = cv2.cvtColor(img, cv2.COLOR_BGR2GRAY)

# Create kernel
kernel = np.ones((5, 5), np.uint8)

# Apply erosion
erosion = cv2.erode(gray, kernel, iterations=1)

# Display result
cv2.imshow("Original Image", gray)
cv2.imshow("Erosion", erosion)

# Save result
cv2.imwrite("erosion.png", erosion)

cv2.waitKey(0)
cv2.destroyAllWindows()

print("Erosion completed successfully!")

Result

Erosion is successfully performed. The objects in the image become thinner and small white regions are reduced.
