EXPNO:18 Edge Detection Using Sobel Matrix Along Y-Axis

Aim

To detect horizontal edges in an image using the Sobel operator along the Y-axis using Python and OpenCV.

Theory

The Sobel operator detects changes in image intensity.

For Y-axis edge detection, the Sobel matrix is:

It mainly detects horizontal edges in an image.

Algorithm

1. Import cv2 and numpy.
2. Read the input image.
3. Convert the image to grayscale.
4. Apply the Sobel operator along the Y-axis.
5. Convert the result into an 8-bit image.
6. Display the original image and Sobel Y edge image.
7. Press any key to close the windows.

CODE:

```
EXP-18.py - C:/Users/POORNA SKHT/OneDrive/Tail file/computer vision ita0502/lab experim...
File Edit Format Run Options Window Help
import cv2
import numpy as np

# Read the image
image = cv2.imread("SEN 10.png")

# Check whether image is loaded
if image is None:
    print("Error: Image not found!")
    exit()

# Convert image to grayscale
gray = cv2.cvtColor(image, cv2.COLOR_BGR2GRAY)

# Apply Sobel operator along Y-axis
sobel_y = cv2.Sobel(
    gray,
    cv2.CV_64F,
    0,
    1,
    ksize=3
)

# Convert result to 8-bit image
sobel_y = cv2.convertScaleAbs(sobel_y)

# Display original image
cv2.imshow("Original Image", image)

# Display Sobel Y edge detection
cv2.imshow("Sobel Y Edge Detection", sobel_y)

# Wait for a key
cv2.waitKey(0)

# Close all windows
cv2.destroyAllWindows()
```

Result:

Edge detection was successfully performed using the Sobel operator along the X-axis. The vertical edges present in the image were detected and displayed successfully.
